

Neuropsychological Evaluations

A neuropsychological evaluation assesses cognitive abilities that may be affected by neurological disorders, such as visual and verbal memory, fine motor coordination, shifting of sets, and novel abstract reasoning among others. A comprehensive neuropsychological evaluation includes the following:

full intelligence battery

measures of verbal and visual memory and learning

measures of executive functioning

measures of academic achievement (if necessary)

visual and verbal abstract reasoning

personality assessment

measures of attention

Neuropsychological evaluations are extensive and take an estimated 8 hours of testing and 7 hours to score the material and write a report.

Child Neuropsychological Evaluations

The Brain Clinic is located only a block and a half from Penn Station at:
19 West 34th Street, Penthouse
New York, NY 10001
